

RESOLUTION #141-2012
A RESOLUTION ESTABLISHING A COMPLETE STREETS POLICY

WHEREAS, the mobility of freight and passengers and the safety, convenience, and comfort of motorists, cyclists, pedestrians- including people requiring mobility aids, transit riders, and neighborhood residents of all ages and abilities should all be considered when planning and designing Fergus Falls' streets and,

WHEREAS, integrating sidewalks, bike facilities, transit amenities, landscaping and safe crossings into the initial design of street projects avoids the expense of retrofits later and,

WHEREAS, streets are a critical component of public space and play a major role in establishing the image and identity of a city, providing a key framework for current and future development and,

WHEREAS, active living integrates physical activity into daily routines and active living communities encourage individuals of all ages and abilities to be more physically active and,

WHEREAS, communities that support active living strive to create amenities that will enhance the quality of life of its residents, improve the physical and social environment in ways that attract businesses and workers, and contribute to economic development and,

WHEREAS, the goal of complete streets is to improve the access and mobility for all users of streets in the community by improving safety through reducing conflict and encouraging non-motorized transportation and transit, which will enhance the promotion of active living as a means to improve the health of the community residents, and improve environmental conditions, including air quality and,

WHEREAS, it is recognized that there are some streets or corridors in the city which would not currently satisfy a complete streets environment,

NOW THEREFORE BE IT RESOLVED by the City Council of the City of Fergus Falls, Minnesota to establish a Complete Streets Policy that provides as follows:

1. The City of Fergus Falls will, whenever it is economically feasible, seek to enhance the safety, access, convenience and comfort of all users of all ages and abilities, including pedestrians, people requiring mobility aids, bicyclists, transit users, motorists and freight drivers, through the design, operation and maintenance of the transportation network so as to create a connected network of facilities accommodating each mode of travel that is consistent with and supportive of the local community, recognizing that all streets are different and that the needs of various users will need to be balanced in a flexible manner.

2. Transportation improvements will include facilities and amenities are recognized as contributing to complete streets, which may include street and sidewalk lighting; sidewalks and pedestrian safety improvements; improvements that provide ADA (American with Disabilities Act) compliant accessibility; bicycle accommodations; and street trees, boulevard landscaping, street furniture and adequate drainage facilities.
3. Early consideration of all modes for all users will be important to the success of this policy. Those planning and designing street projects will give due consideration to bicycle, pedestrian, and transit facilities from the very start of planning and design work. This will apply to all roadway projects, including those involving new construction, reconstruction, or changes in the allocation of pavement space on an existing roadway (such as the reduction in the number of travel lanes or removal of on-street parking.)
4. Bicycle, pedestrian and transit facilities will be considered in street construction, reconstruction, re-paving, and rehabilitation projects except under one or more of the following conditions:
 - A. A project involves only ordinary maintenance activities designed to keep assets in serviceable condition.
 - B. The City Engineer, with Council consideration, determines there are relatively high safety risks.
 - C. Exempts a project due to excessive and disproportionate cost of establishing a bikeway, walkway or transit enhancement as part of a project.
 - D. Determines that the construction is not practically feasible or cost effective because of significant or adverse environmental impacts to streams, flood plains, remnants of native vegetation, wetlands, steep slopes or other critical area, or due to impacts on neighboring land uses, including impact from right-of-way acquisition.
5. It will be important to the success of the Complete Streets Policy to ensure that the project development process includes early consideration of the land use and transportation context of the project, the identification of gaps or deficiencies in the network for various user groups that could be addressed by the project, and an assessment of the tradeoffs to balance the needs of all users. The context factors that should be given high priority include the following:
 - A. Whether the corridor provides a primary access to a significant destination such as a community or a regional park or recreation area, a school, a shopping/commercial area, or an employment center.

- B. Whether the corridor provides access across a natural or man-made barrier such as a river or freeway.
 - C. Whether the corridor is in an area where a relatively high number of users of non-motorized transportation modes can be anticipated.
 - D. Whether a road corridor provides important continuity or connectivity links for an existing trail or path network; or
 - E. Whether nearby routes that provide a similar level of convenience and connectivity already exists.
6. The design of new or reconstructed facilities should anticipate likely future demand for bicycling, walking and transit facilities and should not preclude the provision of future improvements. (For example, under most circumstances, bridges, which last for 75 years or more, should be built with sufficient width for safe bicycle and pedestrian use in anticipation of a future need for such facilities).
 7. The City's goal is to create a comprehensive inventory of the pedestrian and bicycling facility integrated with city street and utility maps and the City plans to carry out projects to eliminate gaps in the sidewalk and trail networks.
 8. Complete streets may be achieved through single projects or incrementally through a series of smaller improvements or maintenance activities over time.
 9. The City will generally follow accepted or adopted design standards when implementing improvements intended to fulfill this Complete Streets Policy, but will consider innovative or non-traditional design options where a comparable level of safety for users is present.
 10. It is the City's goal to develop implementation strategies that may include evaluating and revising manuals and practices, developing and adopting network plans, identifying goals and targets, and tracking measures such as safety and modal shifts to gauge success.

NOW THEREFORE BE IT FURTHER RESOLVED that the Complete Streets Policy guidelines be incorporated into the Fergus Falls Transportation Plan.

The above and foregoing resolution was offered at a regular meeting of the City Council held on August 6, 2012 by Council Member S Synsteliën, who moved its adoption, was seconded by Council Member Cichosz and adopted by the following vote:

AYES: R Synsteliën, Thacker, S Synsteliën, Shelstad, Rachels, Fish, Cichosz, Connelly
NAYS: None

Whereupon the above resolution was adopted.
